

CSC4005 assignment 3 grading criterion

Codes take 70 % of total score while report take 30%.

Criterion of codes

1. 40%—**correctness of codes** : It is graded based on whether the results of your program is correct.
2. 10%—**robustness** : if the program run successfully under different configuration.
3. 15%—**Reproducibility** : If I am able to run your codes according to the instruction you provide.
4. 5%—**Readability**: if your codes are easy to understand or not.

Criterion of report

1. 10%—experiments: if all required experiments are conducted and presented in a proper way.
2. 5%—format: PDF format, title page, required session (introduction, method, result, conclusion), figure with proper caption...
3. 10%—analysis: analysis of the experiment results should be elaborate enough. Deduce the reason behind the experiment data. (For example, explain why using 6 cores in MPI program will result in a surge in running time)
4. 5%—content: Your report should have concise and elaborate illustration in your method session along with a nice flow chart of your design. Your report should have all required content and nicely filled.
